Gerlingen, June 2023

Roller EasySelect - The new selection software for CO₂ air coolers

Following the successful introduction of the Roller EasySelect selection software for brine air coolers and static air coolers, Roller is now extending its software to include the thermodynamic calculation of CO₂ air coolers.

The Roller EasySelect is a web-based software that can be accessed at any time and without a password via the Roller website. It always stays up to date thanks to automatic updates and can also be used offline after loading once.

With its simple and intuitive user interface, the Roller EasySelect supports users in selecting the appropriate CO₂ air cooler. By entering a few common parameters, a thermodynamic calculation is made, which reliably enables the right selection. The user can then use various filters to limit the results according to design, dimensions, fin spacing, sound level and other options.

The final decision on the suitable air cooler can be made based on individual criteria such as price, performance and dimensions. In addition, other available options can be used to customize the selected model. Based on the selection, data sheets and offers are displayed to the user.

With the introduction of this innovative software, Roller is expanding its existing selection software for brine air coolers and static air coolers. The company plans also to continue development of the software to enable the selection of HFC air coolers in the near future.

The Roller EasySelect can be accessed without a password via Roller's website at www.walterroller.de.
